

a. YOLOv8-s → D-Fire test (in-domain)

LaECE 2.6 % · 4,643 detections above the source threshold

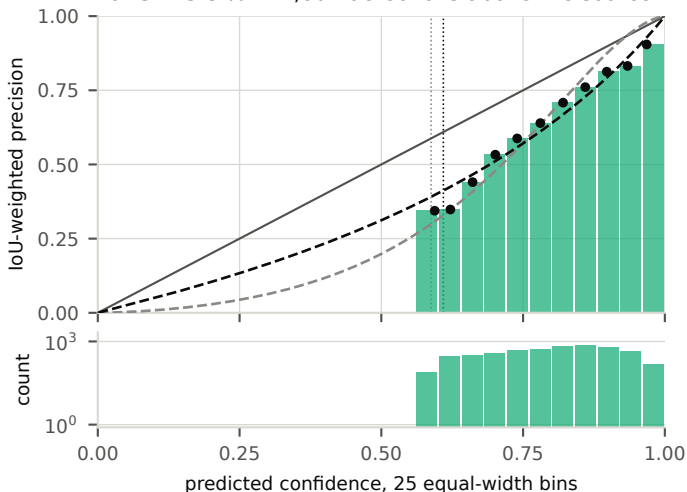

b. YOLOv8-s → Pyro-SDIS (shifted)

LaECE 5.6 % · 336 detections above the source threshold

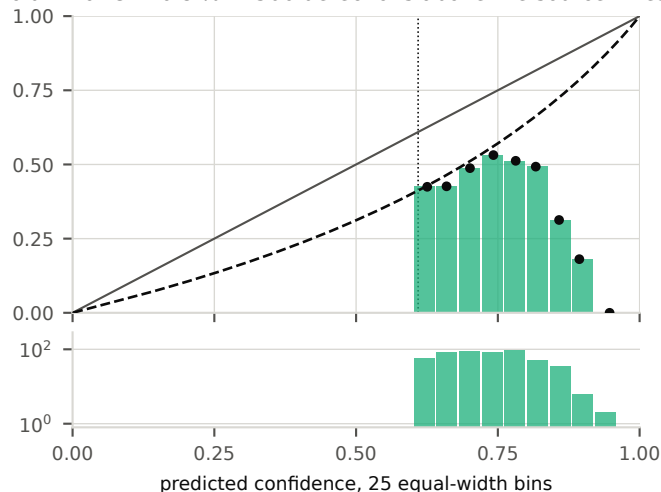

c. RT-DETR-L → D-Fire test (in-domain)

LaECE 13.8 % · 4,601 detections above the source threshold

d. RT-DETR-L → Pyro-SDIS (shifted)

LaECE 26.8 % · 506 detections above the source threshold

— perfect calibration (identity)

● bin mean confidence vs its precision (the gap LaECE sums)

- - - source-fitted Platt map, fire class

⋯ source LRP-optimal threshold, fire class

- - - source-fitted Platt map, smoke class

⋯ source LRP-optimal threshold, smoke class

■ IoU-weighted precision of the bin (identity map)
